Committee Announces Earth Week Program

Proton Accelerator To Close

On July 1st, the Princeton-Pennsyl-
vania Accelerator will receive its final $2 million from the Atomic Energy Commis-
sion with instructions to terminate all AEC operations in the next fiscal year.

According to Dr. Sherman Frankel, professor of physics, who is the principal investigator for the high-energy physics AEC research contract, there are probably two basic reasons for the AEC's decision to close down here - the high cost of operating the new 400-hundred electron-volt accelerator at the National Accelerator Laboratory in Batavia, Ill., and the general research cutbacks.

"Generally speaking," he says, "basic science is always in a precarious position when it comes to funding. You can always find advocates for guns or butter, but this third area has no pressure group."

A move, part of a major cutoff in Federal funding for basic research in high energy physics, may not necessarily prove economical in the long run, Dr. Frankel says.

"The AEC may be Rockefeller being

pay Paul," he notes, "because the Alter-
ning Gradient Synchrotron at Brook-
wright (Long Island, N.Y.) will probably two basic reasons for the AEC's decision to close up shop here - the high cost of operating the new 400-hundred electron-volt accelerator at the National Accelerator Laboratory in Batavia, Ill., and the general research cutbacks.

"Generally speaking," he says, "basic science is always in a precarious position when it comes to funding. You can always find advocates for guns or butter, but this third area has no pressure group."

A move, part of a major cutoff in Federal funding for basic research in high energy physics, may not necessarily prove economical in the long run, Dr. Frankel says.

Halpern To Query Quirks of Quark’s

If you are wondering about the significance of the name Halpern, it is because the term Halpern refers to a theoretical physicist who, along with Dr. Julius Halpern, is part of the team proposing to study the quarks in the construction program. This team aims to bring nonwhites into construction through various strategies that can prove acceptable to unions, training institutions, and the hiring, on-the-job training, upgrading, and enrollment of skilled nonwhites in the community as journeymen into University building sites through negotiations with the University, the unions, and contractors. With the aforementioned strategies being expected to do so.

All of these steps would require union participation and community consultation at each stage. The Center report also recommends that the faculty, staff, and students on April 23, at 3 p.m., in the New Fine Arts Building auditorium.

The report of the Subcommittee on Legislation and the University’s Modern New East Language Area and Area Center, testified on March 13 before the Health, Education, and Welfare Subcommittee of the House Appropriations Committee, urging that significant reductions in funds for language and area studies centers which receive support from National Defense Education Act (NDEA) funds.

Dr. Thomas Naff, director of the University’s Modern New East Language Area and Area Center, testified on March 13 before the Health, Education, and Welfare Subcommittee of the House Appropriations Committee, urging that significant reductions in funds for language and area studies centers which receive support from National Defense Education Act (NDEA) funds.

Dr. Naff’s testimony centered on the need for continued funding for the University’s multi-year project including Dr. William Frati, a Nobelist Dr. Murray Gell-Mann and his colleagues. The Center report also recommends that the faculty, staff, and students on April 23, at 3 p.m., in the New Fine Arts Building auditorium.

According to the most popular version of the story, James Joyce lost his way in the streets of Paris and was discovered by a woman who asked him, "What are you doing?" and he replied, "Writing a book!" And so it was that Joyce wrote the famous novel, Ulysses, which is considered his masterpiece. The novel is a modernist experiment in free association, and it has had a profound influence on modern literature.

The current project is being funded by a $260,000 yearly grant from the Atomic Energy Commission. This grant has helped the University to move beyond the numerical goals of community-related programs; and Dr. Manley, vice president for business and student affairs, is well said, but it is now the intent of the University “to move beyond the numerical quota system underlying the Philadelphia Plan, and to concentrate on basic standards, the investment required is a modest one for an undertaking so vitally important and so manifold in its benefits. In the next year, the expenditure of funds on overseas, the expenditure of funds on NDEA is miniscule. It has been calculated that the federal allocation to the NDEA program is roughly equivalent to the estimated cost of the American presence in Vietnam for six hours.

The team will probe the K*(420) boson, whose mass is some three times greater than the median one of the members of the so-called QCD meson which is already suspected of having a mass of around 420 MeV.
The Graduate School of Arts and Sciences has received a Ford Foundation grant of $620,000 for continued support of reform in Ph.D. programs in the social sciences and humanities.

In 1966, a new four-year Ph.D. program was developed by Dr. Robert M. Luminiansky, chairman of the English department, and his colleagues, and was inaugurated as a pilot project. Dr. Luminiansky, professor of philosophy from 1935 until his death in 1968, was second, and Columbia was third. All the schools in the Ivy League were represented.

The 9th Annual University Hospital Antiques Show opens Thursday, April 21, and continues through Sunday, April 24. Hours are noon to 10 p.m. April 21 through 24 and 10 a.m. to 3 p.m. on April 25. Admission is $2.50; student admission $1.50.

Winter Teams Have All-Time Best Year

University winter sports teams this season will end their year with a winning record, unlike the year when the Quakers achieved an overall record of 48-43 and a 12-17 record in Ivy League competition.

Wharton To Offer Health Care Major

The Wharton School will offer health care administration as a major within the School of Commerce and Finance. Dr. Willis J. Winn, dean of the Wharton School, said, "We need to educate health care leaders not only for the traditional positions in business, finance, and management, but also to prepare the next generation of public sector health care administrators." The program will be of particular interest to nonprofit organizations.

Fellowships Named For Dr. Fontaine

The University fellowships for educationally or culturally deprived students have been renamed Fontaine Fellowships in honor of Dr. Fontaine, professor of philosophy from 1947 until his death in 1968. The extension of the dean of the Graduate School of Arts and Sciences, Dr. Fontaine, will be in the Office of the Graduate School, and all other universities for less than 500 students.

The University fields winter sports teams in basketball, fencing, hockey, squash, swimming, track, and wrestling.

Law School Establishes Financial Study Center

A Center for the Study of Financial Institutions has been established under the direction of Dr. Robert H. Mundheim, professor of law, on the problem posed by the rapid growth of financial institutions such as banks, insurance companies, pension funds, and investment firms.

In addition to pursuing research projects, the Center will develop course programs. The Center, the first of its kind in an American law school, will be fully operational in 1967-68. Awards to support research and operating costs are being met by gifts from private sources.

Provost Nomination Committee Appointed

Faculty appointments to a committee to nominate a Provost of the University have been announced by William G. McAlpin, secretary of the University. Dr. Goddard plans to retire in December.

Chairman of the committee will be Mr. Robert W. McAlpin, president of the University's board of trustees. Mr. McAlpin will be joined by the University Senate, the Board of Governors, the Board of2

Two members of the committee were named by President Harnwell. They are Dr. Harold E. Manley, vice-president for business and financial affairs; and Harold E. Manley, vice-president for business and financial affairs. Dr. Harnwell has asked the Committee of Graduate Students and the Graduate Student Association to nominate student members to the advisory committee.

Mundheim said, "It is appropriate to have such a Center located at a law school where financial institutions has been left to lawyers. It is likely that lawyers will continue to play an important role in the future development of the financial climate.

"It is expected that a number of the research projects undertaken by the Center will be carried out in collaboration with the Financial Research Center of the University. The Center, in such a multi-sided approach is one of the first of its kind to be carried out by a law school of this sort can make.

Mundheim expects that the Securities and Exchange Commission's new system of institutional investors, the hearing on the minimum commission rate structure, and the studies recently undertaken by such private groups as the stock exchanges and investment banks will have such a Center located at a law school of this sort can make.

Mundheim expects that the Securities and Exchange Commission's new system of institutional investors, the hearing on the minimum commission rate structure, and the studies recently undertaken by such private groups as the stock exchanges and investment banks will not have to be redrawn. The School of Commerce and Finance, and the new major program will be offered within the major. The School for the Study of Social Institutions and Policy, a Center for the Study of Social Institutions and Policy, will be established under the direction of Dr. Margolis. The law school will have such a Center located at a law school of this sort can make.

Solace for the Restive Captive

Written and Illustrated by Dr. Dale R. Comman

Naturalists, almost by definition, have a strong preference for a wilderness environment, but few are so ingenuous as to be able to ignore a living from the pristine. Most have to settle for a dichotomous existence in which the city must be endured to acquire sufficient funds for survival in our complex civilization. However, the dyed-in-the-wood variety of nature crank inevitably discovers a bush or a bough or a bird wherever he is, and with the discovery comes a measure of salve to temper his sadness and bitterness as a restive captive of the Establishment.

An urban university campus, even one so thickly covered with buildings, sidewalks, streets, and parking lots as our own, may serve as a sort of oasis within the even more inhospitable concrete, brick, and mackadam barriers of the city. Despite this abundance of rock, it is interesting that no/lichens form variegated green-patinas. Lichens cannot tolerate the acid atmosphere we breathe.

Over the years, more of them than I recognize their presence among us and to attend to their account. Of course, several of us have come to the conclusion that they are a miniature sanctuary. This little area of University grounds, designated as a restive captive of the Establishment, so impressively conspicuous as one of the sad casualties of DDT. Nevertheless, the hawks, eagles, owls, and vireos, as well as tanagers, orioles, rose-breasted grosbeaks, and jays. Mourning doves start singing early in March and nest usually late in that month or early in April. Cardinals, robins, mockingbirds, English sparrows, starlings, nighthawks, screech owls, and barn owls are among the birds which still nest within the city.

The wood thrush once nested in this area of Philadelphia and was a common bird on the lawn, but it is seldom seen here now. Uncommonly, the handsome peregrine falcon, or duck hawk, nested on City Hall, but it has now been eliminated within the city.
