

URBAN DESIGN (FA) {UDES}

723. (CPLN723, HSPV671) Law of Planning and Urban Development. (B) Pritchett/Wendell.

Overview of the constitutional and legal principles framing planning and urban development.

751. (CPLN767, URBS767) Theory and Principles of Urban Design. (A) Barnett.

Introduction to the theoretical basis for beliefs and practices in city and environmental design, including the relation of the built environment to the natural environment, the organization of groups of buildings, the use and meaning of public places, and the relation of technology to land use and community.

752. (ARCH752, CPLN760) Case Studies in Urban Design. (B) Hack.

Through three case studies and a final project this course explains several fundamentally different ways in which the urban design process is realized in this country: The campus as historical prototype and contemporary paradigm; the new community both modernist and neo-traditionalist; expansion/re-location of the CBD; and urban/suburban in-fill. Particular emphasis is placed on the roles of planning, historic preservation and landscape architecture in the practice of urban design.
