Standard Screening Instruments

The following standard instruments do not need to be included in submissions to the IRB.

Questionnaires, in **bold**, may contain more sensitive questions. Depending on the nature of the study, whether the information is already known and in the medical record, the targeted populations, and the other protections in place in your study, the investigator should consider obtaining a Certificate of Confidentiality.

Those in *italic red* contain no sensitive questions.

**Psychiatric, Cognitive, and Behavioral Surveys**

- AAMR Adaptive Behavior Scales
- Achenbach Child Behavior Checklist
- **Beck Anxiety Inventory**
- **Beck Depression Inventory**
- Behavioral Assessment of Pain – Medical Stability
