ASSIGNMENT 8
FEATURE ENGINEERING STUDIO
PROFESSOR RYAN BAKER
POSTERS
"CHARRETTE"
DUE IN CLASS, MONDAY NOVEMBER 4

The goal of this assignment is to create a poster, describing your project so far, to an intelligent person who's in the same field (but who is unlikely to know your work).

The poster does not have to be on actual poster paper (although it's cool if it is). You have to find and bring some way to display it (tape, an easel, etc.). Presentation counts. You will be graded on presentation as well as content.

Your poster should describe
- Data set and where it came from
- What you're trying to predict
- The current best model you have
- The features in that current best model
- Other features you've tried

This poster will be graded in class by a panel of judges. Be prepared to answer questions.

As such, for this assignment there will be NO extensions for being late. In the case of serious illness or something of similar nature, a substitute assignment (which is substantially more work) will be given.
